

WeatherVox V2

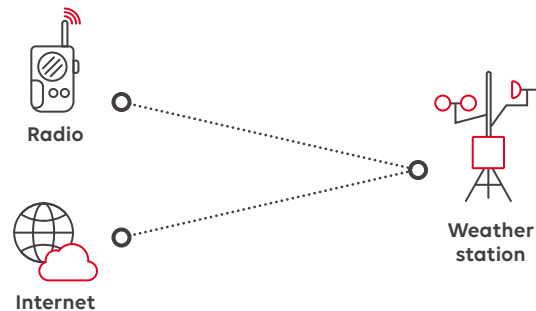

Securing accurate and comprehensive weather information has never been more important. Instant, detailed and customised to your specific needs – timely weather information crosses personal and professional boundaries from firefighters instantly securing climatic conditions and amateur radio operators reporting conditions over radio, to farmers better managing crops or to the internet (Optional)

Why WeatherVox V2?

The culmination of nearly a quarter of a century of development, the WeatherVox V2 is a fully integrated 'plug and play' solution for users with two-way radios and/or internet and compatible weather stations.

Users simply send requests or commands via their 2-way radio and secure instant and customisable weather reports via a digitally recorded human voice. Additionally data is sent to Weather Underground.

Features

Compact and field-rugged, the WeatherVox V2 has easy to use screen menu features, built-in Wi-Fi and mini web server capabilities. It can provide instant and accurate reports on areas including:

- Current outdoor temperature
- Overnight low temperature
- Peak gust today and the time recorded
- Current wind speed and direction
- Average wind direction over the previous minute
- Barometric pressure
- Relative humidity
- Current day rainfall
- Wind chill
- Dew point
